STANLEY TOOLS

IN publishing this catalogue, it has been our purpose to present to the users of STANLEY TOOLS a hand-book containing a comprehensive description and complete specifications, prices, etc., of the tools we manufacture.

During the year 1920 the manufacturing business of The Stanley Rule & Level Company was purchased by The Stanley Works, who manufacture a complete line of Wrought Butts, Hinges, Door Bolts, Garage Hardware, and many other items of wrought hardware.

The consolidation unites the manufacturing interests of the two Stanley companies that have grown side by side for almost seventy years, each developing its separate line of products for the hardware user.

SPECIAL BOOKLETS AND CIRCULARS

In a book of this kind it is impracticable to go into all the details necessary to fully explain how to use many of our special tools, but we publish a number of booklets and circulars covering descriptions and directions for use of particular tools, such as Planes Nos. 55, 45, 444, 171 and 57, Mitre Boxes, Leveling Stand, Butt Gauges, Steel Squares, etc. We will be pleased to send any of these booklets or circulars to those interested, upon request.

MANUFACTURING EXPERIENCE

This Company has been engaged in the designing and manufacture of Carpenter Tools since 1857 under the present name. For several years prior to that time the same business was carried on under other names. We are thus enabled to manufacture and offer tools which are the product of half a century of study and experience that make them the best value on account of design, strength and convenience in use, of any on the market.

GUARANTEE

Every article is carefully inspected before shipment and guaranteed; any article showing a defect in workmanship or material will be replaced free of charge if returned to us.

TRADE MARKS

A trade mark is really a trade name or device to designate or indicate the manufacturer of specific articles; that is, "Bed Rock," "Bailey," "Stanley," "Victor," "Zig Zag," "Forty-five," "Fifty-five," "Gage Self Setting," "Defiance," "Hurwood," "Everlasting," "Odd Jobs," etc., as used, are names and numbers identifying certain tools made only by this Company.

We advise all persons to be sure that genuine Stanley Tools are furnished and not imitations of inferior quality.

"BAILEY"

The name "Bailey," as used by us, refers to that department of its Plane and Spoke Shave business formerly conducted by Mr. Leonard Bailey, and succeeded to by this Company.

"Bailey" Planes Nos. 1, 2, 3, 4, 4½, 5, 5½, 6, 7, and 8, both smooth and corrugated bottoms, as now made, have the word "Bailey" cast upon one end of the plane body, and contain improvements which add greatly to their value.

IN GENERAL

We are frank to state that the design of many of the special tools which we show, originated in the suggestions of our customers. We are always pleased to receive suggestions from tool users.

Stanley Tools are sold in every civilized country, and stocks are carried by all leading jobbers and dealers in hardware.

The tables given in the last pages of this book may prove of value to the person into whose hands the book comes.

We wish to express our great appreciation for the preference which has been shown to our tools in the past, and trust we may be favored with your continued and valued patronage.

STANLEY BOXWOOD RULES

STANLEY BOXWOOD RULES have a superiority due to the quality and seasoning of the Wood, the weight of the Metal used in the Joints and Trimmings, the accuracy of the Graduations and the care given to the finish.

As will be noted in the various tables following, they are made in a wide range of numbers, varying in length, width, form of Joints and Plates, style of trim, and graduations.

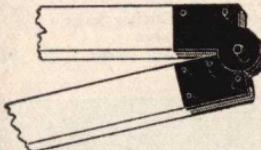

All joints, plates, bindings, etc., in these rules are made of brass which prevents rusting.

In the illustrations we have shown several styles of Joints and Plates used in the manufacture of Stanley Rules.

The principal distinguishing feature of all Boxwood Rules is the main or central joint which is designated as Round, Square, Arch, or Double Arch Joint.

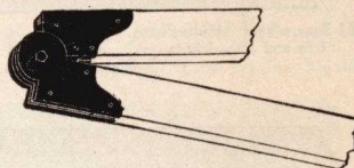

The ROUND JOINT is the one used in the cheapest grades of rule. In this form there is one flange or wing embedded in each leg of the rule, the leg and the wing being pinned together as shown by the cut opposite.

The SQUARE JOINT has two wings to EACH leg, one on each outside face of the wood. This is a much stronger construction than the round joint type as the two wings are securely held together by rivets which go clear through all three. The additional quantity of brass used in this form of joint also adds to the strength of the rule.

The ARCH JOINT follows practically the same form of construction as the Square Joint. However, the wings are larger, more graceful in form, and covering, as they do, more of the surface of the wood, add to the life of the rule.

The DOUBLE ARCH JOINT is substantially the same construction as the Arch Joint, but this Arch Joint is repeated at the folding joint as well as at the central joint, which again adds to the strength of the rule.

The PLATES of the folding joint are made in two styles: MIDDLE PLATES in which the plates are let in the center of the wood and pinned.

EDGE PLATES in which the plates are fastened to the outer edge of the wood by rivets which go through both wood and plate, holding all three firmly together. This latter form insures a much stronger joint.

A Full Bound Rule is one having a brass binding extending along both inside and outside edges of each leg. A Half Bound Rule is one having a brass binding extending only along the outside edges of the legs. Bitted Rules have a brass plate inserted on the edge of the rule to protect the wood from closing pin.

NOTE: Rules with metric graduations on both sides or with metric on one side and inches on the other, also with "English Marking"—that is, with the numbers reading from left to right, can be furnished if so ordered.

STANLEY ZIG-ZAG RULES

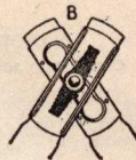

STANLEY "ZIG ZAG" RULES

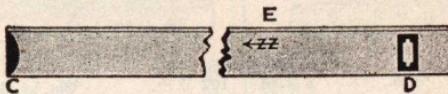

The term "ZIG ZAG" as applied to folding rules made of flexible wood is a trade mark belonging to this company. This trade mark is stamped on the rules either in full length or in its abbreviated form "ZZ."

JOINTS used in "Zig Zag" Rules are made in two distinct styles: The Concealed Joint "A" in which there is no hole through the wood, and the Rivet Joint "B" in which the rivet is carried through both wood and joint.

Both styles of joints contain a stiff spring which holds the rule rigid when open, even in the long lengths.

DIRECTION ARROWS "E" are a patented feature which enable the user to tell at a glance from which end of the rule to commence measuring. They are located near the end of each leg and add materially to the value of the rule.

STRIKE PLATES "D" (patented) are small pieces of metal fastened to the flat surfaces of each section which prevent the wearing away of the graduations when opening and closing. These are used only in connection with the Concealed Joint type, as the form of the rivet on the Rivet Joint type is such that the rivet itself acts as a Strike Plate.

TIPS "C" which are also patented are semi-circular in form, allowing graduations to be run to the extreme end of the rule and are securely fastened to the wood.

FIGURES ARE OF SEVERAL VARIETIES AS ARE HERE DESCRIBED AND ILLUSTRATED.

REGULAR MARKING—In which the rule is continuously marked with the numbers 1, 2, 3, etc., commencing on the outside of the rule.

STYLE "F" MARKING—The numbers 1, 2, 3, etc., commence on the inside of the rule, allowing the rule to lie flat when open. The figures 12, 24, 36, etc., are made extra large.

STYLE "M" MARKING—In which the rules are either Inches on one side and Metric on the other, or Metric on both sides, or in others, Metric, Inches and Burgos. All rules having Metric graduations have enlarged figures at 10, 20, 30 centimeters.

NOTE: All "Zig Zag" Rules are regularly graduated in 16ths inches or 16ths burgos.
All Metric graduations are millimeters.

R

STANLEY METALLIC PLUMBS AND LEVELS

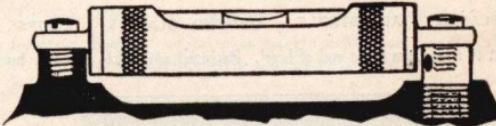

FRAMES OF CASTINGS No. 36 and No. 37 are of corrugated I section, insuring lightness, strength and rigidity, and are milled and ground parallel, so that either surface may be used in leveling. Both levels may be furnished with a groove in the bottom for use on shafting, etc. When so ordered, they are known as No. 36G or No. 37G.

THE ADJUSTMENT of both level and plumb glasses on Levels No. 36 and No. 37 is clearly shown in the above cut. The nickel plated brass case containing level or plumb glass is plugged at both ends. Each plug is provided with a tapered hole, drilled above the center line of the case. Taper pointed screws engage in these holes, thus bringing the tube firmly down onto the two milled seats. Slight adjustment, when necessary, is obtained by loosening one or the other of the screws and packing thin paper between the seat and the tube.

THE ECLIPSE COVER is an outer shell or tube fitting over the level case, which can be turned, either to expose the level glass when in use, or to protect it when not in use. The cut above shows cover partially closed.

IN THE No. 34 LEVEL the glass is suspended in the case between supports, one of which is a part of the casting and therefore fixed, the other a stud which can be moved up or down as required. On both supports the level glass container is held by fastening screws.

LEVEL SIGHTS

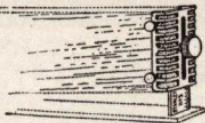

For sighting levels from one given point to another a distance away. Can be quickly attached to any level. When not in use, will pack away in a small space. Furnished in pairs.

| No. | Per Pair | No. | Per Pair |
|--|----------|---|----------|
| 1 For Wood Levels, Japanned, Wgt. per pair $\frac{3}{4}$ lb. | \$1.20 | 2 For Metal Levels, Japanned, Wgt. per pair $\frac{3}{4}$ lb. | \$1.20 |

PITCH ADJUSTERS

For determining an unknown pitch or setting new work to a specified pitch. When attached to one end of a level, the reading on the slide divided by the length of the level in feet shows the pitch in inches per foot. Made for both iron and wood levels. The slide shows readings up to $1\frac{1}{2}$ inches. Particularly useful in laying pipe.

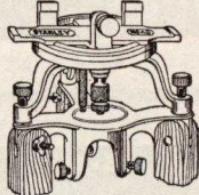

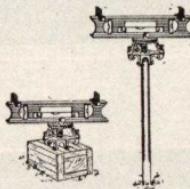

| No. | Each | No. | Each |
|---|--------|--|--------|

ADJUSTABLE LEVELING STANDS

A practical device, light, compact and at low cost, for holding level with sights attached. It enables the user to run grades for ditches, drains, etc., and to set profiles for foundation work very quickly without incurring the expense of surveyor's instruments. It consists of two parts, a base and a rotating level carrier. The base can be attached by set

screws either to one stake or crow-bar or to three stakes forming a quickly improvised tripod, or can be set on a permanent object, as a box or stone. The level carrier is then accurately leveled and locked to this base. Made for use in connection with either wood or iron levels.

| No. | Each |

STANLEY WOOD PLUMBS AND LEVELS

The cuts below illustrate the principal mechanical features of Stanley Wood Plumbs and Levels which are used in combination with the various woods, types of glasses and different forms of brass trim, which make up the most complete line of Wood Levels on the market.

NON-ADJUSTABLE LEVELS have the level glass set in plaster and are fixed and cannot be adjusted. The Plumb glass in this form of level is also fixed. Cut D.

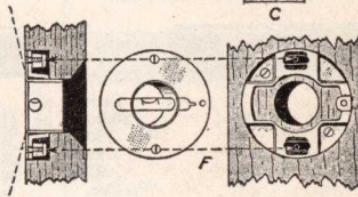

ADJUSTABLE LEVELS have the level glass set in plaster in a metal case. This case is fixed at one end by a screw which holds the plate firmly against a collar. The other end of the level is held against the spiral spring by a screw which permits of it being adjusted. The top plate is entirely independent of the setting, thus preventing tampering with adjustment. Cut B.

The PLUMB GLASS in adjustable levels is set in a brass cylinder flanged at one end, which is secured to a specially formed casing, so made that there is leeway for rotating the flanged cylinder for the proper adjustment. Cut C.

DUPLEX PLUMBS have the glasses close to one surface of the level, giving an increased angle of vision as compared with the regular form shown above. The flange holding the Plumb Glass case against the level is made with a slot, as shown, permitting it to be slightly rotated and adjusted. Cut F.

THREE PLY AND FIVE PIECE LEVELS as shown by the cross section have a novel method of securely holding the sections of the levels in place by a series of tongues and grooves running the entire length of the level. BRASS BOUND LEVELS have the corner bindings dovetailed into the wood and are forced in under pressure. Cut G.

THE "HAND-Y" GRIP, a feature of all Stanley Wood Levels, gives the workman a secure hold of his level and decreases the chance of dropping the tool. Both Plumb and Level side views are blackened, a trade mark and exclusive Stanley feature, which concentrates the light directly on the bulb, thus enabling the user to quickly locate its position.

&

PACKED 6 IN A BOX

STANLEY ANGLE TOOLS AND BEVELS

ANGLE DIVIDERS

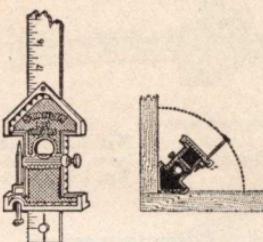

To lay out the cut bisecting an angle with an ordinary level necessitates the use of dividers and a second handling of the bevel, making three operations.

The Stanley Angle Divider is designed for performing this work at one setting and is practically a double bevel. The two blades each fit one side of an angle and the handle gives the center line. The cut is marked from the center.

The handle is graduated on the under side for laying out 4, 6 or 8-sided work, and, by means of a removable "T" head, it can also be used as a "T" square.

No. 30 7 $\frac{3}{8}$ in. Long, Nickel Plated, Wgt. each $\frac{5}{8}$ lb. Each \$2.25

"ODD JOBS"

It combines a Level, Plumb, Try Square, Mitre Square, Bevel, Scratch Awl, Depth Gauge, Marking Gauge, Mortise Gauge, Beam Compass and a One Foot Rule. The rule is graduated in sixteenths of inches.

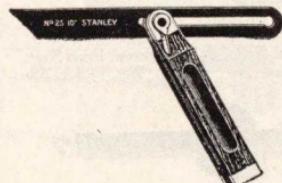

All parts of the tool are carefully machined so that in using same for any purpose where any of the above mentioned tools are required, sufficient accuracy may be obtained for all practical purposes.

No. 1 4 in. Long, Nickel Plated Wgt. each $\frac{5}{8}$ lb. Each \$1.10

SLIDING "T" BEVELS

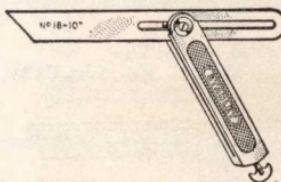

Those bevels have an improved locking device which prevents the Blade from slipping.
Blades are machined and are ground on both sides and edges.

100-NTD

STANLEY STEEL SQUARES

Stanley Steel Squares combine the highest quality of workmanship and material. They are made from one piece of steel, and unless otherwise specified, all two-foot Squares are tapered in thickness from the angle outward, and have specially hardened corners.

On the opposite page, the two larger cuts show the general appearance and proportions of the Square, although the cuts are so small that the graduations or the tables can not be clearly shown. The smaller cuts are intended to show colors of

finishes. Graduations on blued and copper Squares are filled with white.

The Steel Square has essentially two parts—the tongue and the body—the tongue being the shorter, narrower part; and the body the longer, wider part.

The cuts on this page give in reduced size and in detail portions of the well-known tables or scales which are stamped on the Squares.

Complete details of the method of using these tables will be found in a booklet which is packed with each Square.

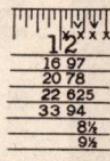

Rafter or Framing Table

This is always found on the body of the Square. It is used for determining the length of common, valley, hip and jack rafters and the angles at which they must be cut to fit at the ridge and plate.

The appearance of this table is a column six lines deep under each inch graduation from 2 to 18 inches.

The 12-inch section only of this table is shown here, but at the left of the table on the Square will be found letters indicating the application of the figures given.

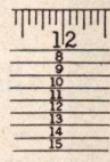

The symbols \times and \wedge as applied to this table, are a patented feature designed to do away with the possibility of making errors in laying out angles for cuts.

Essex Table

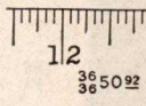

This is always found on the body of the Square. This table shows the board measure in feet and 12ths of feet of boards one inch thick of usual lengths and widths.

On Stanley Squares, it consists of a table 8 lines deep under each inch graduation as shown by the cut at the right which represents the 12-inch section of this table.

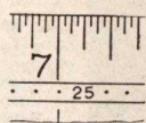

Brace Table

This table is found on the tongue of the Square. It shows the length of the brace to be used where the rise and run are from 24 inches to 60 inches and are equal.

OCTAGON SCALE

This is located on the tongue of the Square, and is used for laying out a figure with eight equal sides on a square piece of timber. It is a scale, the graduations of which are represented by 65 dots located $\frac{1}{16}$ ths of an inch apart.

HUNDREDTHS SCALE

This scale is found on the tongue of the Square and by means of a divider, decimals of an inch may be obtained. It is used particularly in reference to brace measure.

STANLEY STEEL SQUARES

"TAKE DOWN" TWO FOOT STEEL SQUARES

These are of the highest quality as regards material, workmanship, and are mechanically correct and when assembled are square inside and out.

The tongue is dovetailed into the body of the square and drawn up against the shoulder to insure its proper position.

The cam locking device draws the tongue firmly against the shoulder, by turning the cam, as indicated in the small cut, either with the key furnished with the square, or with a screw driver or coin.

The cam and tongue are so designed that any wear will be taken care of automatically and the square will be always correct when the tongue is locked into position.

STANLEY BIT BRACES

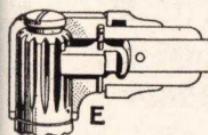

STANLEY BIT BRACES

Combinations of HEADS, RATCHETS and JAWS, with the trims and finishes, make up the different numbers of Bit Braces. The Heads are of three general classes, known as: METAL CLAD BALL BEARING HEAD, cut "A"; REGULAR BALL BEARING HEAD, cut "B"; PLAIN HEAD, Cut "C".

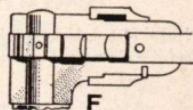

CONCEALED RATCHET—Cut "D" shows the interior of the Concealed Ratchet in which the Ratchet is in alignment with the Bit. The Ratchet parts are entirely enclosed, keeping out moisture and dirt, and retaining lubrication. The Ratchet

mechanism is interchangeable and may be taken apart by removing one screw. The two-piece Clutch, which is drop forged, machined and hardened, is backed by a spring, insuring a secure lock. Never less than five teeth in engagement.

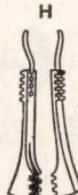

BOX RATCHET—Cut "E" shows the Box Ratchet in which the gear teeth are cut on an extra heavy spindle and encased so that the user's hands are protected from the teeth. The Pawls work at right angles to the line of the spindle. If necessary, the spindle may be taken out by unscrewing the large screw shown in the cut.

OPEN RATCHET—Cut "F" is the ordinary Open Ratchet with the gear cut on a separate piece of steel, separately made and pinned to the spindle in assembly. The Ratchet mechanism is exposed and cannot be taken apart.

UNIVERSAL JAWS, cut "G," for both wood and metal workers, hold round shank bits and drills from $\frac{1}{8}$ inch to $\frac{1}{2}$ inch, and taper shanks as large as No. 2 Clark Expansion Bit.

TWO-PIECE ALLIGATOR JAWS, cut "J," suitable for ordinary size taper shank bits.

INTERLOCKING JAWS, cut "H"—the best Jaw for taper shanks, which they hold up to No. 2 Clark's Expansion Bit, and, therefore, particularly recommended for carpenters.

SPRING ALLIGATOR JAWS, cut "I," which hold ordinary size taper shank bits, also small and medium drills.

S

STANLEY CORNER BIT BRACES

R

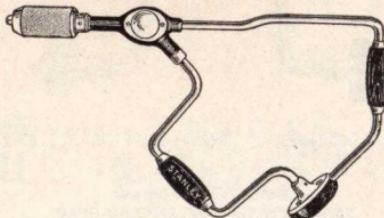

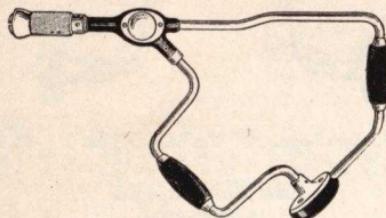

For corner work, when using a bit of ordinary size, these braces will work much faster than a regular ratchet brace.

The gears are of bevel type, the teeth carefully cut, and the whole mechanism enclosed to protect same from dirt as well as to guard the user's hands.

The quill is fastened to the head by three screws, one of which goes through that part of the frame where it enters

the head, securely fastening all three together.

These braces are made in two styles of chucks or jaws; otherwise are the same and of the following specifications: Nickel plated, metal clad ball bearing head, cocobolo head and handles, jaws forged, machined and hardened, with springs for automatic release.

| No. | | Each |
|-----|---------------------------------|--------|
| 992 | 8 Inch Sweep Interlocking Jaws | |
| | Wgt. 1/6 doz. 7 3/4 lbs. | \$6.70 |
| 10 | 10 Inch Sweep Interlocking Jaws | |
| | Wgt. 1/6 doz. 8 lbs. | 7.25 |

| No. | | Each |
|-----|------------------------------|--------|
| 993 | 8 Inch Sweep Universal Jaws | |
| | Wgt. 1/6 doz. 8 1/4 lbs. | \$6.70 |
| 10 | 10 Inch Sweep Universal Jaws | |
| | Wgt. 1/6 doz. 8 1/2 lbs. | 7.25 |

STANLEY CORNER RATCHET BIT BRACES

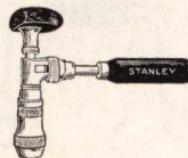

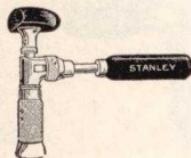

This style of Ratchet Bit Brace is designed particularly for Electricians, Plumbers and Gas Fitters, but many other Mechanics who have occasion to work close up into corners find it a very useful tool.

The knurled ring between the head and the ratchet mechanism, operated by the thumb and finger of the hand holding the head, is for the purpose of starting and holding the bit until it is far enough in the wood, so that it will not reverse when the handle is turned back.

The peculiar shape of the head enables the user to place the Brace close up to horizontal or perpendicular surfaces.

These Braces are made in two styles of chucks or jaws; otherwise, are the same and of the following specifications:

Nickel plated, ball bearing head, cocobolo head and handle, jaws forged, machined and hardened, with springs for automatic release.

| No. | | Each |

"BAILEY" AND "BED ROCK" PLANES

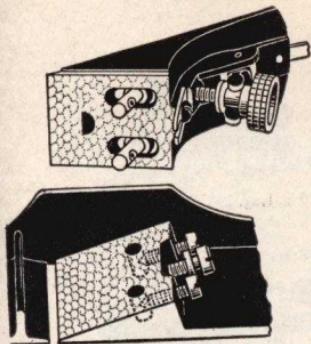

S

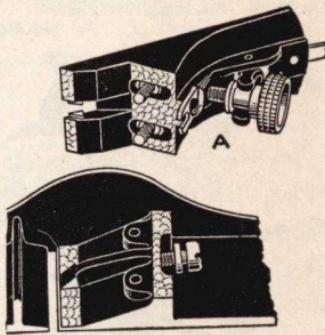

R

"BED ROCK" AND "BAILEY" IRON PLANES

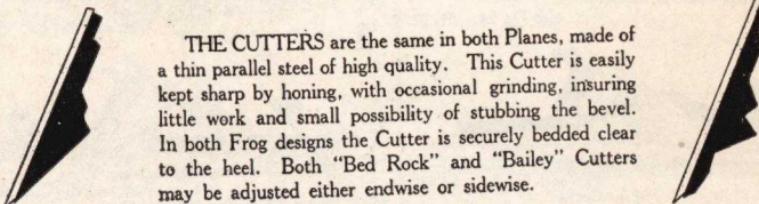

THE ILLUSTRATIONS ON OPPOSITE PAGE will show the present outside appearance of Iron Bench Planes identified by this Company's trademarks "BED ROCK" and "BAILEY," long and favorably known. The Knob on both "Bed Rock" and "Bailey" Planes is of special design, giving great ease in handling. It will be noticed that the shape of the sides of the "Bed Rock" is distinctive and readily identifies the Plane. The essential differences in the two lines of Planes cannot be seen from the outside but consist of the design of the Frogs and Frog Seats.

IN "BED ROCK" PLANES, as shown in opposite cuts, the bottom of the Frog is machined so as to make it a tongue which fits into a groove formed in the bottom of the Plane. This design insures great solidity and perfect alignment between the Frog and the bottom. The movement of the Frog in the groove for widening or opening the throat and the loosening or tightening of the Frog to the base of the Plane is governed by Screw Adjustment which may be operated without removing the Cap or the Cutter

IN THE "BAILEY" PLANE the Frog may be adjusted for width of throat opening after removing the Cap and the Cutter and slightly loosening the screws which clamp the Frog to the base. Cut opposite also shows the ribbed construction of the bottom and the machined surfaces which give great solidity and solid setting for the Frog (A).

THE CUTTERS are the same in both Planes, made of a thin parallel steel of high quality. This Cutter is easily kept sharp by honing, with occasional grinding, insuring little work and small possibility of stubbing the bevel. In both Frog designs the Cutter is securely bedded clear to the heel. Both "Bed Rock" and "Bailey" Cutters may be adjusted either endwise or sidewise.

26

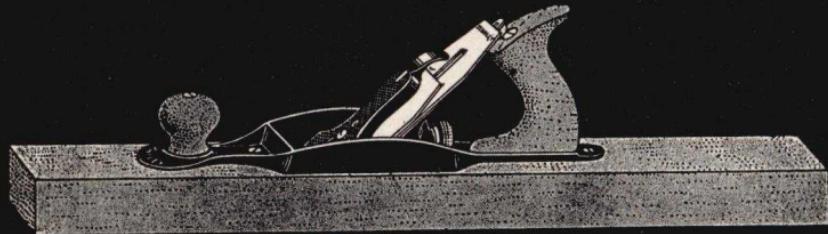

9 1/2"

19

G 28

32

S GAGE SELF-SETTING PLANES R

The Gage Self-Setting Wood Plane as made in Vineland, N. J., has recently been acquired by this Company and the manufacture will be continued, as well as an additional line of Iron Planes of the same principle.

The illustrations on the opposite page show the present appearance of the Wood Planes and also of the new Iron Planes, both of which are of a distinctive design.

THE SELF-SETTING FEATURE lies in the fact that the plane iron, if taken out to be honed or sharpened, goes back in exactly the same position as before removal.

Likewise the plane cap, when taken out to allow removal of the cutter, goes back in its same position.

THE PLANE CAP (A) is the same in Iron and Wood Planes. The upper part is cast iron and has a steel bottom fastened to it by screws. The steel bottom may be so adjusted before the screws are set up so that, when the parts are all assembled in the plane, the steel cap so fits the cutting iron as to make it either a single or double plane iron, as desired, for various kinds of work. The cap is black in cut.

THE PLANE IRON (B) shown in the cut consists of three pieces—the cutter, the adjustment slide fastened to the under side of the cutter (shown black), and the binder plate fastened above the cutter—all three being fastened by one screw.

THE ADJUSTMENT SLIDE (C) is machined on its sides to accurately fit the groove machined in the frog and is also machined to fit the adjusting screw, so that it is permanently fixed both side-ways and endwise. This is the same in both Iron and Wood Planes.

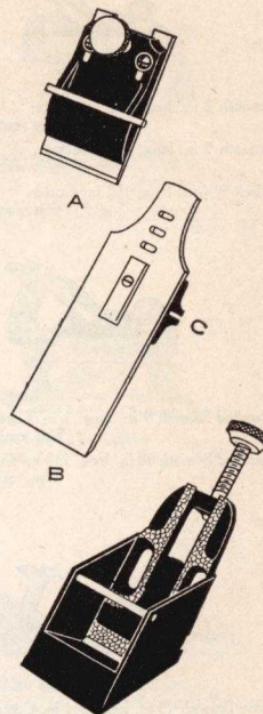

THE FROG in the wood plane is a part of an iron throat which fits into the plane wood and is there fastened by screws. (See cut.) This iron throat is adjustable as the plane bottom wears, thus eliminating any difficulty of the mouth wearing large. The bottom of this throat is ground a little rounding and may be set slightly below the plane bottom, which enables the plane to cut very fast with a fine shaving.

In the iron plane the Frog is fitted to the plane bottom and then permanently attached by screws and pin, so that a continuous cutter seat obtains clear to the plane mouth.

There is an endwise screw adjustment to the cutter in both the Iron and Wood Planes.

Cut to left shows iron frog part of plane body.

Cut to right, plane wood is black, showing how iron throat is set.

S MISCELLANEOUS PLANES R

SWINGING FENCE MATCH PLANES

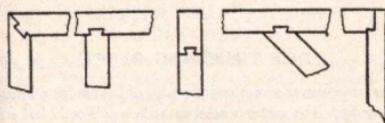

These Planes have two plow cutters of the same width, and one extra wide cutter. The fence in one setting exposes two cutters for cutting the tongue, and, when reversed, leaves only one exposed for cutting the groove. On thicker boards than the plane works on center, the extra wide cutter is used when cutting the tongue. Nickel plated. Rosewood knobs.

| No. | | Each |
|-----|--|--------|
| 48 | Cuts $\frac{5}{16}$ in. Groove on Boards $\frac{3}{4}$ in. to $1\frac{3}{4}$ in. Centers on $\frac{1}{8}$ in. Wgt. each $3\frac{3}{4}$ lbs. | \$6.30 |
| 49 | Cuts $\frac{5}{16}$ in. Groove on Boards $\frac{1}{2}$ in. to $\frac{3}{4}$ in. Centers on $\frac{1}{2}$ in. Wgt. each $2\frac{3}{8}$ lbs. | 6.30 |

DOVETAIL PLANE

The only Plane manufactured that will cut a dovetail. It will cut any size grooves and tongues to fit, with sides at flare of 20 degrees, where the width of the neck is more than $\frac{1}{4}$ inch and the depth of groove not more than $\frac{3}{4}$ of an inch. The tongue and groove are cut separately and can be made with parallel or tapering sides.

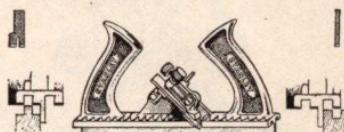

| No. | | Each |
|-----|---|---------|
| 444 | Nickel Plated, 9 in. long Wgt. each 6 lbs. | \$14.70 |

For prices of Plane Irons and Plane Parts see pages 110 to 114

DOUBLE END MATCH PLANES

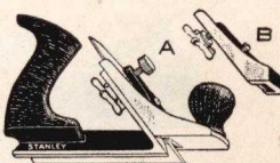

These Planes have two cutters, a plow, and a tongue tool, both governed by one permanent fence. The tongue tool has one edge wider than the other, which overhangs one side when tonguing on center. Both tongue and groove are cut by working the tool in the same direction, by merely reversing it end for end. Nickel plated.

| No. | | Each |
|-----|---|--------|
| 146 | Cuts $\frac{1}{8}$ in. Groove on Boards $\frac{3}{8}$ in. to $\frac{1}{2}$ in. Centers on $\frac{3}{8}$ in. Wgt. each $1\frac{1}{2}$ lbs. | \$4.75 |
| 147 | Cuts $\frac{3}{16}$ in. Groove on Boards $\frac{1}{2}$ in. to $\frac{3}{4}$ in. Centers on $\frac{3}{8}$ in. Wgt. each $1\frac{1}{8}$ lbs. | 5.05 |
| 148 | Cuts $\frac{1}{4}$ in. Groove on Boards $\frac{3}{4}$ in. to 1 in. Centers on $\frac{7}{8}$ in. Wgt. each $2\frac{3}{8}$ lbs. | 5.40 |

ADJUSTABLE CHAMFER PLANE

This Plane will do perfect chamfer or stop-chamfer work. It has a ninety degree V bottom which acts as a mitre guide. To this is attached an adjustable front, "A," having a flat bottom which carries the cutter. This front can be set for different sizes of chamfer. Front "A," can be readily detached and a bull-nose front, "B," (furnished with the Plane) substituted, permitting the Plane to be worked close up into corners.

| No. | | Each |
|-----|--|--------|
| 72 | Rosewood Handle and Knob, 9 in. long, $1\frac{5}{8}$ in. Cutter Wgt. each $3\frac{3}{8}$ lbs. | \$5.10 |

|----|---|--------|

EDGE TRIMMING BLOCK

For trimming or smoothing the edge of boards for a square or close fit. The cutter works on a skew. Wood blocks of various bevels may be attached enabling the user to make a slanting cut.

| No. | | Each |
|-----|---|--------|
| 95 | 6 in. long, ⅜ in. Cutter, Japanned Wgt. each 1¼ lbs. | \$2.50 |

8

PACKED 1 IN A BOX

L

STANLEY RABBET AND DADO PLANES

DUPLEX, FILLETSTER AND RABBET PLANE

Has two seats for the cutter, one for regular and the other for bull-nose work. It has a spur and a removable depth gauge. The adjustable fence can be used on either side and slides under the bottom. To work as a rabbet plane, remove fence and arms.

No. 78 8½ in. long, 1½ in. Cutter Wgt. each 3 lbs. \$3.95

HANDED IRON RABBET PLANES

These planes will lie flat on either side and can be used with right or left hand while planing into corners or up against perpendicular surfaces.

They are fitted with a spur and a detachable depth gauge.

No. 190 8 in. long, 1½ in. Cutter Wgt. each 2½ lbs. \$3.50

191 8 in. long, 1¼ in. Cutter Wgt. each 2¼ lbs. 3.30

192 8 in. long, 1 in. Cutter Wgt. each 2 lbs. 3.10

SKEW CUTTER FILLETSTER AND RABBET PLANE

Has an extra wide skew cutter, and an adjustable spur on each side. The fence and depth gauge can be attached to either side; the fence sliding under the bottom. Remove arms and fence, and a Skew Cutter Rabbet Plane is obtained.

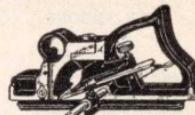

No. 289 8½ in. long, 1¾ in. Cutter Wgt. each 3¾ lbs. \$4.55

RABBET AND FILLETSTER PLANE

This plane will lie perfectly flat on either side and has an adjustable fence for regulating width of cut.

It is fitted with two spurs and an adjustable depth gauge. The front part of the plane can be detached for bull nose work. The cutter is adjustable endwise.

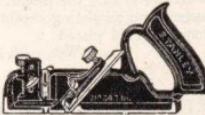

No. 278 6¾ in. long, 1 in. Cutter. Wgt. each 2 lbs. \$3.80

HANDED IRON DADO PLANES

They will keep true even in the narrowest widths. They have skew cutters, an adjustable depth gauge, and two adjustable spurs.

In ordering, always give the number (39) and width of cutter desired.

| No. | 39 | 8 in. long, | 1/4 in. Cutter, | Wgt. each | 13/4 lbs. | Each |

Each
\$3.80

CABINET MAKERS BLOCK PLANE

For Piano Makers and workmen in kindred trades requiring an extra fine tool for finishing hard wood, etc. The sides and bottom, being square with each other, the Plane will lie perfectly flat on either side, and can be worked either right or left hand. The metallic handle can be attached to the top of either edge. It can be used for work with a shoot board in planing mitres, etc. The mouth and cutter are adjustable.

No. 9 10 in. long, 2 in. Cutter, Rosewood knob
Wgt. each $4\frac{1}{2}$ lbs. \$10.10

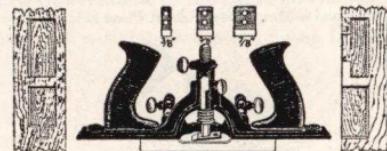

DOOR TRIM AND ROUTER PLANE

This Plane will make mortises for butts, face plates, strike plates, escutcheons, up to a depth of $\frac{5}{16}$ inch and a width of 3 inches. A fence regulates the position of the cut and insures the sides being parallel. The depth of the cut is governed by a positive stop.

It is also a very superior Router Plane.

An extra wooden bottom of any size desired can be screwed on, enabling the user to router on large openings.

Three forged steel cutters, $\frac{3}{8}$, $\frac{5}{8}$, and $\frac{7}{8}$ inches wide, are furnished.

No. 171 11 in. long, Japanned, Rosewood handle
Wgt. each 3 lbs.

Each
\$7.05

STANLEY MISCELLANEOUS PLANES

BELT MAKERS PLANE

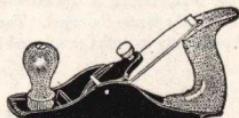

For chamfering down the ends or laps of a belt before fastening them together. It is very largely used by belt manufacturers, but it is also a valuable tool for all users of belting, enabling them to make repairs that otherwise would require that the belt be sent to the makers. It is fitted with an adjustable throat. The cutter is adjustable endwise. Hardwood Handle.

No. 11 5 1/4 in. long, 2 3/8 in. Cutter, Japanned Each
Wgt. each 3 1/2 lbs. \$5.10

SCRUB PLANES

For planing down to a rough dimension any board that is too wide to conveniently rip with a hand saw, an operation that is sometimes called "hogging." This is made possible by reason of the peculiar shape of the extra heavy cutter the cutting edge of which is round instead of square. Handle and Knob of beech.

No. 40 9 1/2 in. long, 1 1/8 in. Cutter, Japanned Each
Wgt. each 2 1/8 lbs. \$2.65
40 1/2 10 1/2 in. long, 1 1/2 in. Cutter, Japanned
Wgt. each 2 1/2 lbs. 3.55

ADJUSTABLE FLOOR PLANE

This Plane is fitted with an adjustable throat, permitting a wide or narrow mouth according as coarse or fine work requires. It is designed for working from a kneeling position, the double handle making it an easy tool to work under such conditions. The cutter is adjustable endwise. Hardwood Handle.

No. 11 1/2 7 1/2 in. long, 2 3/8 in. Cutter, Japanned Each
Wgt. each 3 3/4 lbs. \$7.50

HANDED FLOOR PLANE

The Handle is 45 inches long, made of hardwood and provided with double grips. This permits the plane to be worked from a standing position.

No. 74 10 1/2 in. long, 2 3/8 in. Cutter, Japanned Each
Wgt. each 2 1/2 lbs. \$11.75

| Tonguing | 1/4 in. | |
| | Wgt. each 3 1/2 lbs. \$10.25 | |

BULL NOSE COMBINATION

For Plow, Matching and Rabbet work. The tool has two interchangeable front parts that make it either an ordinary or a Bull Nose Plane. With the Bull Nose attachment, it will work into a 1/2 inch hole as in sash fitting, stair work, etc. Fitted with a depth gauge, and a fence.

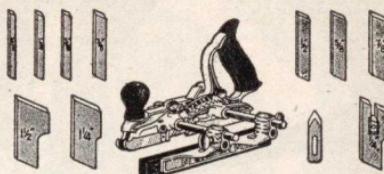

| No. | | Each |
|---------------|--|------|
| 143 | 9 1/4 in. Long, Nickel Plated, Rosewood Handle | |
| | 10 Cutters as follows: | |
| Plow and Dado | 1/6, 5/16, 1/4, 5/16, 3/8, 7/16, 11/16 in. | |
| Tonguing | 1/4 in. and Slitting Cutter | |
| | Wgt. each 4 3/8 lbs. \$8.80 | |

Cutters for Planes 50, 46, 47 and 143 have the same prices as the No. 55 Plane Cutters (page 75) of same size. In ordering, specify both the number of plane and the size of the cutter. Extra parts priced on pages 110 to 114.

SKEW CUTTER COMBINATION

For Plow, Dado, Filletster, Matching and Rabbet work. Fitted with spurs, a depth gauge and a fence with Rosewood face.

| No. | | Each |
|-----------------|---|------|
| 46 | 10 1/2 in. Long, Nickel Plated, Rosewood Handle | |
| | 12 Cutters as follows: | |
| Plow and Dado | 3/16, 1/4, 5/16, 3/8, 1/2, 5/8, 13/16, 7/8, 1 1/4 in. | |
| Filletster | 1 1/2 in. | |
| Tonguing | 1/4 in. and Slitting Cutter | |
| | Wgt. each 5 3/4 lbs. \$11.75 | |
| 47 | is the No. 46 Plane without the fence and with only 7 Cutters as follows: | |
| Dado | 3/8, 1/2, 5/8, 13/16, 7/8, 1 1/4 in. | |
| Slitting Cutter | | |
| | Wgt. each 3 3/4 lbs. \$9.25 | |

CURVE RABBET

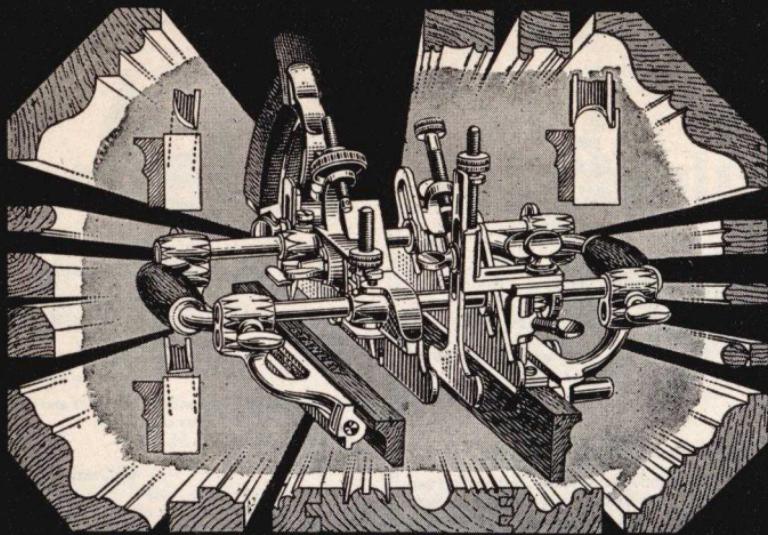

Will cut rabbets on the outside or inside of curved or straight edges.

It has two adjustable cutters, the upper acting as a spur for the lower and also cutting the side of the rabbet. The lower skew cutter cuts the bottom of the rabbet. Adjustable depth gauge and fence.

| No. | | Each |
|-----|---------------------------|------|
| 196 | 9 in. Long, Nickel Plated | |
| | Wgt. each 3 lbs. \$8.80 | |

STANLEY "FIFTY-FIVE" PLANE

Regular Tools with No. 55

Special Tools for No. 55

Special Tools for No. 55

STANLEY "FIFTY-FIVE" PLANE

This Tool, in addition to being a Beading and Center Beading Plane, a Plow, Dado, Rabbet, Filletster, and Match Plane, a Sash Plane and a Slitting Plane, is also a superior Moulding Plane, and will accommodate cutters of almost any shape and size. In fact, it is "A PLANING MILL WITHIN ITSELF."

The regular equipment sent with the Plane comprises fifty-three cutters, all of which are shown in the cut on the

opposite page. These cutters, together with the Plane and all its attachments, are packed in a neat, substantial box.

A further line of forty-one cutters are carried in stock. Cutters of practically any form can be used in the Plane, which the owner can make from blanks or order from sketch.

All metal parts of the Plane are nickel plated. The handle and fences are made of selected rosewood, and every part is well finished.

No.
55 Nickel Plated, with 53 Cutters.

The numbers on work shown on opposite page refer to cutter used. A special booklet covering use of this Plane is issued.

CUTTERS REGULARLY SUPPLIED WITH PLANE

The following cutters are furnished with each Plane. The prices are given in case duplicates should be required:

THE STANLEY WORKS

S

STANLEY SCRAPER PLANES

R

DOUBLE HANDLE SCRAPER PLANES

The handles are of rosewood with a double grip, and being placed across the center of the tool, give it a good balance. The blades are adjustable endwise and for angle, and can be firmly locked in position desired.

No. 12 6 1/4 in. long, 3 in. Blade, Japanned Each
 Wgt. each 3 3/4 lbs. \$5.85

12 1/4 6 1/4 in. long, 2 in. Blade, Japanned
 Wgt. each 2 1/2 lbs. \$4.95

ROSEWOOD BOTTOM

This wood bottom is especially adapted for use on very fine work, as it renders less liable the possibility of marring or scratching the surface being worked upon. This bottom is detachable, and, when worn, can be readily removed and a new one substituted.

No. 12 1/2 6 1/4 in. long, 3 in. Blade, Japanned Each
 Wgt. each 4 lbs. \$7.90
 Extra Rosewood Bottom .50

SINGLE HANDLE SCRAPER PLANES

The handle and knob have the same form as the regular "Bailey" Plane, being preferred by some users to the two-handle or double grip form of Scraper Plane.

The blades are adjustable endwise and for angle, and can be firmly locked in position desired.

No. 212 5 1/2 in. long, 1 3/8 in. Blade, Japanned Each
 Wgt. each 1 1/2 lbs. \$3.65

112 9 in. long, 3 in. Blade, Japanned
 Wgt. each 4 lbs. \$5.10

CABINET MAKERS SCRAPER PLANE

In working, the blade springs backward opening the mouth and allowing the shaving to pass through it. As soon as working pressure is released the blade springs back to its normal position. Handle and knob are pivoted, to allow tilting for convenience when working into corners or up against perpendicular surfaces. Rabbet mouth.

No. 85 8 in. long, 2 in. Blade, Japanned Each
 Wgt. each 2 5/8 lbs. \$5.45

For prices of Parts see pages 110 to 114

S

R

STANLEY SCRAPERS

DOUBLE HANDLE—IRON BOTTOM

The blade may be sprung to a slight curve by means of a thumb screw, giving ease of operation and quickness of cut. The handles are raised to protect the user's hands, and pierced so that the tool can be hung up out of the way. Body and handles cast in one piece.

No. 80 11 in. long, $2\frac{3}{4}$ in. Blade, Japanned Each
Wgt. each $1\frac{3}{4}$ lbs. \$1.55

DOUBLE HANDLE—ROSEWOOD BOTTOM

This Scraper has a rosewood bottom for use in the finest cabinet work. The handles are raised to protect the hands, and pierced so that it can be hung up out of the way. Body and handles cast in one piece.

No. 81 10 in. long, $2\frac{1}{2}$ in. Blade, Nickleled Each
Wgt. each $2\frac{1}{4}$ lbs. \$2.40
Extra Rosewood Bottom .50

DOUBLE HANDLE—ROLLER BOTTOM

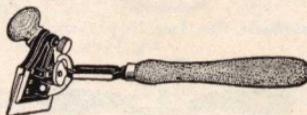

This Scraper has a roller back of the blade which acts as a support to relieve the strain on the wrists of the workman. Handle is made of beech and can be detached for working into corners.

No. 83 9 $\frac{1}{2}$ in. long, 4 in. Blade, Nickleled Each
Wgt. each $1\frac{1}{4}$ lbs. \$1.55

SINGLE HANDLE—ADJUSTABLE

This Scraper has an adjustable single handle which can be tilted to give the blade any angle desired. Special blades of different forms and widths can be securely held in any position required, thus permitting the tool to be worked in many places inaccessible to other Scrapers. Handle and knob of hardwood.

No. 82 14 $\frac{1}{2}$ in. long, 3 in. Blade, Japanned Each
Wgt. each $1\frac{3}{4}$ lbs. \$1.60

BOX SCRAPER

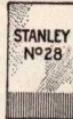

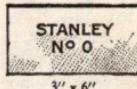

For removing stencils and other markings from the surface of boxes, floors, etc. The handle is hinged above the surface. The face of the bottom and the edge of the cutter are slightly curved away from the center, allowing the user to scrape clean any uneven surface. Handle is made of maple.

No. 70 13 in. long, 2 in. Blade, Japanned Per Doz.
Wgt. $\frac{1}{2}$ doz. 6 lbs. \$10.80

HAND SCRAPERS AND TOOTHING CUTTERS

These Scrapers are made of high grade English steel, and great care is taken to give them a special temper for this work.

STANLEY SCREW DRIVERS

STANLEY SCREW DRIVERS

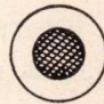

STANLEY "HURWOOD" SCREW DRIVERS are unsurpassed for strength, durability, accuracy of tips, quality of handles and general appearance. The cuts on opposite page show the "Hurwood" with black handles, and the "Defiance" with red handles.

THE BLADE, SHANK AND HEAD are formed from one piece of special steel. The shank passes through the handle and ferrule and is pinned, as shown in cut.

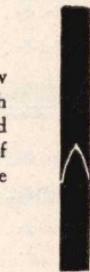

THE HEAD has two patented projecting wings, which together with the pin keep the shank from turning in the handle.

"HURWOOD" ELECTRICIANS SCREW DRIVERS, so termed, have the head countersunk in the handle and insulated by a non-conducting plug of a hard material.

STANLEY "DEFIANCE" SCREW DRIVERS have a shank squared at the end and forced into the handle. The shank, handle and ferrule have a pin passing through them, which together with the squared shank securely fastens the shank to the handle.

THE TIPS in both the "Hurwood" and "Defiance" lines of Screw Drivers in addition to a full variety of sizes of Standard Tips are made with so-called Cabinet Makers Tips in which the sides of the tip are parallel instead of being tapered. The width of the tip being the same as the diameter of the shank, permits a countersunk screw to be followed up. All tips are carefully hardened and tempered.

STANLEY CHISELS

S

R

STANLEY "EVERLASTING" CHISELS

The color illustrations on the opposite page show the general appearance of Stanley "Everlasting" Chisels, which are made in three styles—FIRMER, POCKET or CABINET, and BUTT. Each of these styles can be furnished with either beveled or square edges, and in sizes as listed on succeeding pages.

HEAD, SHANK AND BLADE are of patented construction, having the head, shank and blade forged from one piece of tool steel, as shown in the cut above.

This construction insures great strength and durability and provides for a maximum of efficiency, as a blow on the head of the Chisel is transmitted directly to the cutting edge. Great care is used in the manufacture, especially in the heat treatment of the blade.

THE HANDLE is made from selected hickory and is well finished and fits very snugly into the ferrule. A leather washer is placed between the handle and the steel head to serve as a cushion, thus relieving the handle from shock when the blow is struck.

This construction tends to prevent the handle from splitting, but as a further safeguard, a brass ring is driven into the large end of the handle. These two safeguards make the handle practically indestructible.

THE FERRULE is machined from bar steel and is assembled to the Chisel by upsetting the heated shank against the ferrule, practically making the shank and ferrule one piece.

The cuts at the side illustrate the two styles of BLADES, the beveled and the square edge. In both cases the cutting edge is ground sharp before leaving the factory.

STANLEY HOLLOW HANDLE TOOL SETS

R

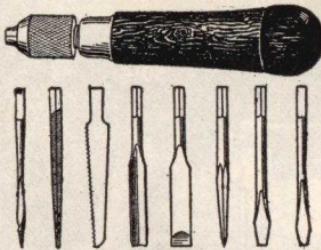

The Screw Cap which covers the recess containing the tools is fitted with a steel strike plate. The Jaws are case hardened and are held open by a spring. The Chuck Body is of large diameter. The Shell is extra heavy, knurled and nickel plated.

With each handle, 10 tools are furnished as follows: 1 each, Gimlet, File, Saw, Gouge, Chisel, Reamer, Brad Awl, Scratch Awl, and 2 Screw Drivers. Made of tool steel, hardened, tempered and polished, and are approximately 4 inches long.

An extra Saw $6\frac{1}{4}$ inches long is furnished if desired, at 10 cents each.

No. 300 Cocobolo Handle, $7\frac{3}{8}$ in. long, 10 Tools
Wgt. each 1 lb.

Each
\$3.00

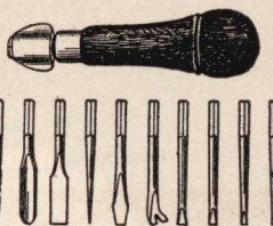

The Jaws are of malleable iron and are permanently secured in the Chuck Body. The Shells are knurled, and the Shells, Jaws and Ferrules are nickel plated.

With each Handle, 8 tools are furnished as follows: 1 each, Gimlet, File, Saw, Gouge, Chisel, Reamer, and 2 Screw Drivers. All are made of special tool steel, hardened, tempered and polished, and are approximately 4 inches long. An extra Saw $6\frac{1}{4}$ inches long is furnished if desired, at 10 cents each.

No. 301 Cocobolo Handle, $7\frac{3}{8}$ in. long, 8 Tools
Wgt. $\frac{1}{2}$ doz. 5 lbs. \$2.25

No. 302 Hardwood Stained, $7\frac{3}{8}$ in. long, 8 Tools
Wgt. $\frac{1}{2}$ doz. 4 $\frac{1}{4}$ lbs. 2.05

The Jaws are of malleable iron and permanently secured in the Chuck Body.

The Wing Nut, Jaws and Ferrule are nickel plated.

With each Handle, 10 tools are furnished as follows: 1 each, Gimlet, Gouge, Chisel, Scratch Awl, Screw Driver, Tack Puller and 4 assorted Brad Awls, hardened, tempered and polished tips. They are approximately $2\frac{1}{3}$ inches long.

| No. | Each |
|--|--------|
| 303 Cocobolo Handle, $5\frac{1}{4}$ in. long, 10 Tools | |
| Wgt. $\frac{1}{2}$ doz. $2\frac{3}{4}$ lbs. | \$1.80 |
| 304 Maple Handle, $5\frac{1}{4}$ in. long, 10 Tools | |
| Wgt. $\frac{1}{2}$ doz. 2 lbs. | .95 |

The extra tools are conveniently placed in the Ferrule around the Socket, where they are in plain view for selection.

With each Handle, 12 tools are furnished as follows: 1 each, Chisel, Reamer, Scratch Awl, Screw Driver, Tack Puller, Belt Awl, and 6 Brad Awls assorted. All are hardened and tempered and the tips are polished. They are approximately $1\frac{5}{8}$ inches long.

| No. | Each |

STANLEY MITRE BOXES

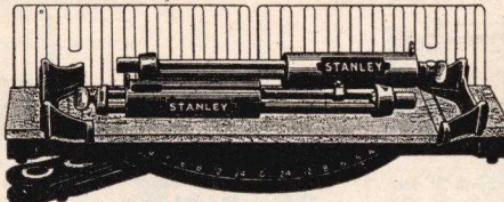

S

STANLEY AND VICTOR MITRE BOXES

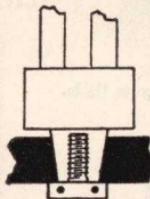

R

Illustrations on the opposite page show: Saw supported above the work (both hands free); Degree graduation (swivel may be set and automatically locked for any degree shown); Figures on the casting (settings for multi-sided work of common shape); Length Gauge (recently added); Graduated saw uprights, Depth stops, Stock guides (for holding circular and irregular work).

This cut shows the Stanley Mitre Box knocked down, so it can be readily carried or packed. This can be quickly done and the parts are easily put together. All parts

are interchangeable. The legs go into sockets and are tightened by a screw. The saw guide uprights are loosened or tightened by adjustment of only one screw.

Cut 1 shows the method of tightening the upright in the Stanley Box, which is by a large screw drawing a tapered socket into a tapered hole and locking it.

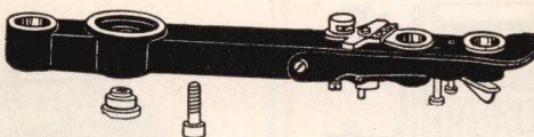

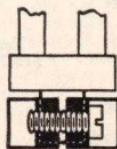

Cut 2 shows the method in the Victor Box, where the socket fits into a split swivel and is locked by a screw drawing the split swivel together.

In either box before finally locking the saw guide, care should be taken to set the uprights so that they are the proper distance apart for the working of the saw. Saws vary in thickness and a different setting is required for each saw.

Cut 3 shows the bars set either for the narrowest or widest saw play.

THE SWIVEL rotates around a large machined steel bushing, which is screwed to the frame, thus giving a large bearing surface and allowing for a new bushing, if any wear occurs. There are two sockets in the swivel for the forward saw guide, permitting the use of a short saw or allowing a longer stroke with a long saw. The swivel is locked on the index plate near the saw guides, thus reducing leverage and insuring strength of the lock.

S STANLEY SAW SETS AND SHOOT BOARD R

STANLEY "PISTOL GRIP" ADJUSTABLE SAW SETS

The shape of the Body and Handle enables the user to operate the tool with great ease as the saw set is held in a comfortable and natural position. The saw is held firmly against the gauge while the tooth is being set.

The saw teeth are in plain view which enables the user to quickly adjust the tool to the tooth to be set.

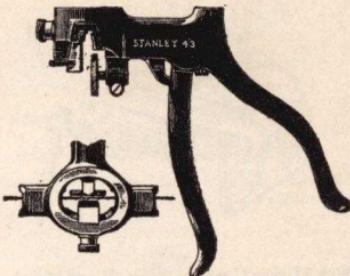

FOR BACK AND PANEL SAWS

No. 42 Black Finish Wgt. each 1 lb. Each \$2.10

They can be readily adjusted to give a greater or less set to the teeth of the saw, according as the saw is to be used for coarse or fine work. As the anvil or part against which the plunger works is graduated, the same adjustment can be easily obtained for duplicate work.

FOR CROSS CUT SAWS

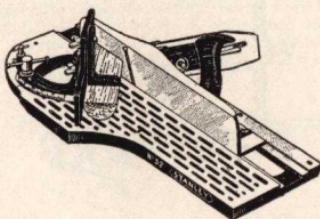

No. 43 Black Finish Wgt. each 1½ lbs. Each \$4.50

STANLEY SHOOT BOARD AND PLANE

For Pattern Makers, Cabinet Makers, Printers, Picture Framers, and Electrotypers. Amateurs will also find this tool very useful. The Board is of ribbed construction, and has an adjustable runway, accurately machined for the Plane. The Swivel can be locked at any angle between zero and ninety degrees, the quadrant being graduated between these points. The Swivel is also fitted with a sliding back supporting the work to the edge. It is further provided with a sliding

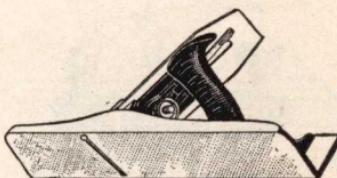

Back Clamp to hold any shaped work in position. The Plane is especially constructed for the Board, and has Rosewood handle and knob. The cutter has adjustment for depth of cut, also a lateral adjustment, so that a cut giving any ordinary draft to a pattern can be made. Being set on a skew, it will make a very smooth, clean cut. If desired the Plane can be furnished without the Board.

SHOOT BOARD AND PLANE

No. 52 22 in. long, Plane 15 in. long, 2¾ in. Cutter
Wgt. each 17½ lbs. Each \$23.45

|-------------------|--------------------------------------|
| 386 Nickel Plated | Wgt. each $2\frac{1}{4}$ lbs. \$2.50 |

DOWEL AND ROD TURNING MACHINE

For cutting dowels of various sizes and lengths, also for forming rods of practically any length.

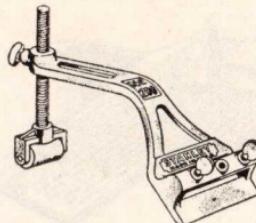

The crank can be adjusted for a long or short throw, giving power or speed to the machine as desired. One cutter head complete for making dowels or rods $\frac{3}{8}$ inch in diameter is furnished with each machine. Additional cutter heads with cutters $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{7}{16}$, $\frac{1}{2}$, $\frac{9}{16}$, $\frac{5}{8}$, $\frac{11}{16}$ and $\frac{3}{4}$ inch can be furnished if desired.

| No. | Each |
|-------------|--------------------------------|
| 77 Japanned | Wgt. each 10 lbs. \$11.35 |
| | Extra Cutter Heads \$1.00 each |

CUTTER AND CHISEL GRINDER

A device for holding Plane Irons, Chisels and other similar cutting tools that they may be ground or honed to any desired angle or bevel.

| No. | Each |
|-------------------|--------------------------------------|
| 200 Nickel Plated | Wgt. each $1\frac{5}{8}$ lbs. \$1.40 |

STANLEY MISCELLANEOUS TOOLS

STANLEY BENCH BRACKET

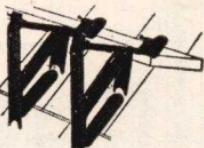

When the jaw or nose is put through a hole in the bench front, it is automatically held in place, and by means of the screw clamp, the board being worked upon is firmly secured.

No. 203 Bench Bracket Wgt. $\frac{1}{2}$ doz. $6\frac{1}{4}$ lbs. Per Doz. \$6.00

STANLEY ROOFING BRACKETS

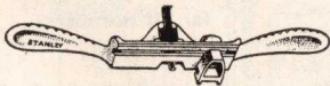

These Brackets are made of spring steel so constructed that any increase of pressure or weight from above increases their security by pressing the spurs into the shingles.

No. 1 8 in. long, 1 in. wide, Japanned Per Doz.
Wgt. $\frac{1}{2}$ doz. $6\frac{1}{4}$ lbs. \$6.60

STANLEY HAND BEADER

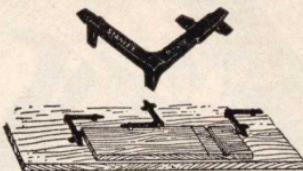

With each beader are furnished a square gauge for straight work and an oval gauge for curved work. Also the following eight cutters sharpened at both ends: 6 single beads $\frac{1}{8}$, $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$ and $\frac{1}{2}$ inch; 2 fluting tools $\frac{3}{16}$ and $\frac{1}{4}$ inch; 4 reeding tools (2 beads $\frac{3}{16}$ inch, 3 beads $\frac{1}{4}$ inch, 3 beads $\frac{5}{16}$ inch and 4 beads $\frac{1}{2}$ inch); 2 routers $\frac{1}{8}$ and $\frac{1}{4}$ inch, and a $\frac{1}{8}$ inch blank.

No. 66 11 $\frac{1}{2}$ in. long, 8 Cutters, Nickel Plated Each
Wgt. each $1\frac{3}{8}$ lbs. \$1.75

PORTABLE BENCH DOG

One or more can be so placed as to securely hold a board or other work in almost any position required.

No. 202 Bench Dog Wgt. $\frac{1}{2}$ doz. $1\frac{1}{4}$ lbs. Per Doz. \$3.00

CLAPBOARD SIDING MARKER

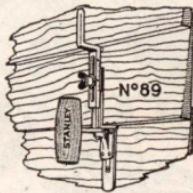

By moving the tool half an inch, it will mark a full line across the clapboard, exactly over and conforming to the edge of the corner board.

No. 88 8 $\frac{3}{4}$ in. long, 4 in. wide, Adjustable Blade Wgt. each $\frac{7}{8}$ lb. Per Doz. \$9.00

CLAPBOARD SIDING GAUGE

The clapboard can be held any width to the weather, by the graduated scale on the tool.

No. 89 8 $\frac{3}{4}$ in. long, 2 $\frac{1}{2}$ in. wide Wgt. $\frac{1}{4}$ doz. $1\frac{3}{4}$ lbs. Per Doz. \$9.00

PRICE LIST OF PLANE IRONS

R

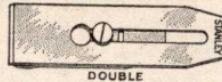

It will be noted that in many cases the same Single Iron fits a number of different Planes, but the Cap Iron (which combined with the Single Iron makes the Double Iron), is not the same on the Iron, Wood and Circular Planes and

consequently is not interchangeable. In ordering, it is necessary to give the number of the Plane, size of Iron and state whether Single or Double Iron is required. For prices of Plane Irons not given below, see pages 110 to 113.

FOR "BED ROCK" AND "BAILEY" IRON AND WOOD PLANES

SINGLE

DOUBLE

| Size | Plane Irons | Plane Irons | Plane Iron |
|---|----------------|----------------|--------------|
| | Single Each | Double Each | Caps Each |
| 1 $\frac{1}{4}$ in. for Plane No. 1 | \$0.45 | \$0.80 | \$0.35 |
| 1 $\frac{5}{8}$ in. for Plane Nos. 2, 602 | .50 | .85 | .35 |

All parts listed can be readily put into the Brace by the user. Other parts can be supplied if required, but should any piece be wanted that is not shown, it is better that the Brace be returned to the factory for repairs. Some parts having the same name differ

in design in the different Braces. We show different cuts bearing the same number to illustrate the different designs. Heads and quills are shown in section to make difference of construction clear. Always give the number of the Brace when ordering repairs.

| 1568160 | = | 10890 | = | 1210 = 40 = 1 | |
| 6272640 | = | 43560 | = | 4840 = 160 = 4 = 1 | |

640 Acres = 1 Square Mile.

An Acre = a square whose side is 69.57 Yards or 208.71 Feet.

CUBIC MEASURE (Measures of Volume)

| Cu. Ins. | Cu. Feet | Cu. Yard |
|----------|----------|----------|
| 1728 | = | 1 |
| 46656 | = | 27 = 1 |

A Cord of Wood = 128 Cubic Feet, being 4 feet \times 4 feet \times 8 feet.

42 Cubic Feet = a Ton of Shipping.

1 Perch of Masonry = 2¾ Cubic Feet, being 16½ feet \times 1½ feet \times 1 foot.

LIQUID OR WINE MEASURE

The U. S. Standard Gallon measures 231 Cubic Inches, or 8.33888 Pounds Avordupois of pure water, at about 39.85 degrees Fahr., the Barometer at 30 Inches.

| Gills | Pints | Quarts | Gallons | Tierces | Hogsheads | Puncheons | Pipes | Tun | Cubic Inches |
|-------|-------|--------|---------|---------|-----------|-----------|-------|-----|--------------|
| 4 | = | 1 | | | | | | | 28.375 |
| 8 | = | 2 | = | 1 | | | | | 57.75 |
| 32 | = | 8 | = | 4 | = | 1 | = | | 231. |
| 1344 | = | 336 | = | 168 | = | 42 | = | 1 | |
| 2016 | = | 504 | = | 252 | = | 63 | = | 1½ | |
| 2488 | = | 672 | = | 336 | = | 84 | = | 2 | |
| 4032 | = | 1008 | = | 504 | = | 126 | = | 3 | |
| 8064 | = | 2016 | = | 1008 | = | 252 | = | 6 | |

A Cubic Foot contains 7½ Gallons.

The British Imperial Gallon contains 277.27 Cubic inches and = 1.2 U. S. Gallons.

U. S. WEIGHTS AND MEASURES.

DRY MEASURE

The Standard Bushel contains 2150.42 Cubic Inches, or 77.627013 Pounds Avoirdupois of pure water at maximum density. Its legal dimensions are 18 $\frac{1}{4}$ Inches diameter inside, 19 $\frac{1}{4}$ Inches outside, and 8 Inches deep; and when heaped the cone must be 6 Inches high, making a heaped Bushel equal to 1 $\frac{1}{4}$ struck ones.

| Pints | Quarts | Gallons | Pecks | Bushels | Cubic Inches. |
|-------|--------|---------|-------|---------|---------------|
| 2 | = | 1 | = | | 67.2 |
| 8 | = | 4 | = | 1 | 268.8 |
| 16 | = | 8 | = | 2 | 537.6 |
| 64 | = | 32 | = | 8 | 2150.42 |

The British Imperial Bushel contains 2218.2 Cubic Inches and = 1.03 U. S. Bushels.

AVOIRDUPOIS OR COMMERCIAL WEIGHT

The Grain is the same in Troy, Apothecaries and Avoirdupois Weights.

The Standard Avoirdupois Pound is the weight of 27.7015 Cubic Inches of distilled water weighed in the air at 35.85 degrees Fahr., Barometer at 30 Inches. 27.343 Grains = 1 Drachm.

| Drachms | Ozs. | Lbs. | Long Qrs. | Long Cwt. | Long Ton |
|---------|------|-------|-----------|-----------|----------|
| 16 | = | 1 | | | |
| 256 | = | 16 | = | 1 | |
| 7168 | = | 448 | = | 28 | = |
| 28672 | = | 1792 | = | 112 | = |
| 573440 | = | 35840 | = | 2240 | = |
| | | | | 80 | = |
| | | | | 20 | = |
| | | | | | 1 |

The above Table gives what is known as the Long Ton. The Short Ton weighs 2000 Pounds.

TROY WEIGHT

For Gold, Silver and Precious Metals.

| Grains | Dwts. | Ozs. | Lbs. |
|--------|-------|------|------|
| 24 | = | 1 | |
| 480 | = | 20 | = |
| 5760 | = | 240 | = |
| | | 12 | = |
| | | | 1 |

175 Pounds Troy = 144 Avoirdupois.

Pounds Avoirdupois X .82286 = Pounds Troy.

Pounds Troy X 1.2153 = Pounds Avoirdupois.

The Jewelers' Carat is equal in the United States, to 3.2 Grains; in London, to 3.17 Grains; in Paris, to 3.18 Grains.

APOTHECARIES WEIGHT

United States and British.

In Troy and Apothecaries Weights, the Grain, Ounce and Pound are the same.

| Grams | Scruples | Drachms | Ozs. | Lbs. |
|-------|----------|---------|------|------|
| 20 | = | 1 | | |
| 60 | = | 3 | = | 1 |
| 480 | = | 24 | = | 8 |
| 5760 | = | 288 | = | 96 |
| | | | = | 12 |
| | | | = | 1 |

THE METRIC SYSTEM.

To ascertain contents of a piece of timber, find in the table the contents of one foot and multiply by the length, in feet, of the piece.

EXAMPLE: What is the Contents (Board Measure) of a piece of timber 10 in. x 7 in., 20 ft. long?

ANSWER: $5.83 \times 20 = 116.6$ feet Board Measure.

PROPERTIES OF TIMBER.

| Description. | Weight per cubic foot in lbs. | Tensile Strength per sq. in. in lbs. | Crushing Strength per sq. in. in lbs. | Relative Strength for Cross Breaking White Pine equal 100. | Shearing Strength with the Grain lbs. per sq. in. |
|------------------|---|---|--|---|--|
| Ash..... | 43 to 55.8 | 11,000 to 17,207 | 4,400 to 9,363 | 130 to 180 | 458 to 700 |
| Beech..... | 43 to 53.4 | 11,500 to 18,000 | 5,800 to 9,363 | 100 to 144 | |
| Cedar..... | 50 to 56.8 | 10,300 to 11,400 | 5,600 to 6,000 | 55 to 63 | |
| Cherry..... | | | | 130 | |
| Chestnut..... | 33 | 10,500 | 5,350 to 5,600 | 96 to 123 | |
| Elm..... | 34 to 36.7 | 13,400 to 13,489 | 6,831 to 10,331 | 96 | |
| Hemlock..... | | 8,700 | 5,700 | 88 to 95 | |
| Hickory..... | | 12,800 to 18,000 | 8,925 | 150 to 210 | |
| Locust..... | 44 | 20,500 to 24,800 | 9,113 to 11,700 | 132 to 227 | |
| Maple..... | 49 | 10,500 to 10,584 | 8,150 | 122 to 220 | 367 to 647 |
| Oak, White.... | 45 to 54.5 | 10,253 to 19,500 | 4,684 to 9,509 | 130 to 177 | 752 to 966 |
| Oak, Live.... | 70 | | 6,850 | 155 to 189 | |
| Pine, White.... | 30 | 10,000 to 12,000 | 5,000 to 6,650 | 100 | 225 to 428 |
| Pine, Yellow.... | 28.8 to 33 | 12,600 to 19,200 | 5,400 to 9,500 | 98 to 170 | 286 to 415 |
| Spruce..... | | 10,000 to 19,500 | 5,050 to 7,850 | 86 to 110 | 253 to 374 |
| Walnut, Black. | 42 | 9,280 to 16,000 | 7,500 | | |

The above table should be taken with caution, as there is often very wide variations in any species.

CUT NAILS AND TACKS.

THE TERM "PENNY" AS APPLIED TO NAILS

The origin of the terms "six-penny," "ten-penny," etc., as applied to nails, though not commonly known, is involved in no mystery whatever. Nails have been made a certain number of pounds to the thousand for many years and are still reckoned in that way in England, a ten-penny being a thousand nails to ten pounds, a six-penny a thousand nails to six pounds, a twenty-penny weighing twenty pounds to the thousand; and, in ordering, buyers call for the three-pound, six-pound, or ten pound variety, etc., until, by the Englishmen's abbreviation of "pun" for "pound," the abbreviation has been made to stand for penny, instead of pound, as originally intended.

LENGTH AND NUMBER OF CUT NAILS TO THE POUND

| 1000 " " " " $1\frac{1}{8}$ in. | 10d Fin. | 30 |

GAUGING AND WANTAGE RODS.

GAUGING ROD

To ascertain the capacity of a barrel, insert the rod in the bung-hole, in a slanting direction, to the chine, note point on the rod which comes exactly in the middle of the bung-hole, on a line with the under side of the stave; then reverse the process, running the point of the rod to the chine at the other end of the barrel; and if the bung-hole is exactly in the middle of the barrel, the result will be the same as before, and the capacity of the barrel will be shown. If the measurements differ, add them together and divide by two, and you have the number of gallons the barrel will hold.

WANTAGE ROD

Having found the capacity of the barrel by use of the Gauge Rod, insert the Wantage Rod perpendicularly in the bung-hole, holding it so that the brass lip points toward the head of the barrel; lower it slowly until the lip comes just under the inner side of the stave, then withdraw it, being careful not to let the rod go any further into the barrel; and the mark where the rod is wet, on the line which has the full capacity of the barrel at the top, shows the number of gallons that are wanting to fill it.

GRIP OF LAG SCREWS IN OAK

| | | | | | |
|-------------------|---------|---------|---------|---------|-------|
| Diameter of Screw | 1/2 in. | 5/8 in. | 3/4 in. | 7/8 in. | 1 in. |
| Depth of wood | 3 1/2 " | 4 " | 4 " | 5 " | 6 " |
| Force in lbs. | 4960 | 6000 | 7685 | 11500 | 12620 |

PINE SHINGLES.

NUMBER AND WEIGHT OF PINE SHINGLES TO COVER ONE SQUARE OF ROOF

Table based on 4 inch width. For other widths multiply given number by 4 and divide by the width in question.

1 Square = 100 Square feet.

| | | | | | |
|---|-----|-------|-----|-------|-----|
| Number of inches exposed to weather. | 4 | 4 1/2 | 5 | 5 1/2 | 6 |
| Number of shingles per square of roof | 900 | 800 | 720 | 655 | 600 |
| Weight in lbs. of shingles on one square of roof..... | 216 | 192 | 173 | 157 | 144 |

The number of shingles per square is for common gable roofs. For hip roofs, add 5% to these figures. The weights per square are based on the number per square. Shingles come 250 to the bundle. 4-inch shingles weigh 240 lbs. to 1,000.

PAINTING.

1 lb. paint will cover about 4 square yards first coat, and about 6 square yards for second coat.

| | | |
|--|------------|------------------|
| 1 gal. paint will cover on stone or brick..... | 190 to 225 | Superficial feet |
| " " " " on concrete, etc..... | 300 to 375 | " " |
| " " " " on wood..... | 375 to 525 | " " |
| " " " " on well painted surface of iron 600 | " | " " |
| " of tar " " first coat..... | 90 | " " |
| " " " " second coat..... | 160 | " " |

BRICKWORK.

Brickwork work is estimated by the thousand, and of various thicknesses of wall, runs as follows:

8 $\frac{1}{4}$ inch Wall, or 1 Brick in thickness, 14 Bricks per superficial foot
12 $\frac{3}{4}$ inch Wall, or 1 $\frac{1}{4}$ Brick in thickness, 21 Bricks per superficial foot
17 inch Wall, or 2 Brick in thickness, 28 Bricks per superficial foot
21 $\frac{1}{4}$ inch Wall, or 2 $\frac{1}{4}$ Brick in thickness, 35 Bricks per superficial foot

An ordinary Brick measures about 8 $\frac{1}{4}$ x 4 x 2 inches, which is equal to 66 cubic inches or 26.2 Bricks to a cubic foot. The average weight is 4 $\frac{1}{2}$ Lbs.

APPROXIMATE WEIGHTS OF VARIOUS ROOF COVERINGS.

For preliminary estimates the weights of Various Roof Coverings may be taken as below:-

| Name | Weights in lbs. per Square or Roof. (100 sq. ft.) |
|---|---|
| Cast Iron Plates, $\frac{3}{8}$ inch thick..... | 1500 |
| Copper..... | 80-125 |
| Felt and Asphalt..... | 100 |
| Felt and Gravel..... | 800-1000 |
| Iron Corrugated..... | 100-375 |
| Iron Galvanized Flat..... | 100-350 |
| Lath and Plaster..... | 900-1000 |
| Sheathing, Pine 1 inch thick, yellow northern..... | 300 |
| Sheathing, Pine 1 inch thick, yellow southern..... | 400 |
| Spruce, 1 inch thick..... | 200 |
| Sheathing, Chestnut or Maple, 1 inch thick..... | 400 |
| Sheathing, Ash, Hickory or Oak, 1 inch thick..... | 500 |
| Sheet Iron, 1/16 inch thick..... | 300 |
| Sheet Iron, 1/16 inch thick, and laths..... | 500 |
| Shingles, Pine..... | 200 |
| Slates, $\frac{1}{4}$ inch thick..... | 900 |
| Skylights (Glass, 3 /16 to $\frac{1}{2}$ inch thick)..... | 250-700 |
| Sheet Lead..... | 500-800 |
| Thatch..... | 650 |
| Tin..... | 70-125 |
| Tiles, Flat..... | 1500-2000 |
| Tiles (Grooves and Fillets)..... | 700-1000 |
| Tiles, Pan..... | 1000 |
| Tiles, with Mortar..... | 2000-3000 |
| Zinc..... | 100-200 |

FLOORING AND SIDING.

In estimating matched flooring, a square foot of $\frac{3}{8}$ inch stuff is considered to be one foot Board Measure.

If the flooring is 3 inches or more in width, add $\frac{1}{4}$ to assumed Board Measure to allow for the forming of tongue and groove; for less than 3 inches in width, add $\frac{1}{3}$.

A square foot of 1 $\frac{1}{8}$ inch finished flooring is considered to be 1 $\frac{1}{4}$ feet Board Measure.

To calculate the Board Measure of same, figure as if 1 inch thick and add 60 per cent. to cover extra thickness and waste in tonguing, grooving, etc.

Siding is measured by superficial foot.

6 inch Siding nominal width actually measures 5 $\frac{5}{8}$ inches.
